

Larry Jacinto Construction - GPS+ Offers Many Advantages

Company: Larry Jacinto Construction

Location: Mentone, California

Person Interviewed: Daniel Burrola

Position: Foreman

Topcon Products:

HiPer GGD base/rover

System Five 3D-GPS+ dozer system

Topcon laser

Larry Jacinto Construction specializes in subdivisions and street improvement projects. **Daniel Burrola**, foreman for **Jacinto**, finds that **Topcon's GPS+ survey and machine control systems** offer many advantages. The one he appreciates most is reducing the need for a full-time grade checker.

Jacinto Construction often takes site prep projects located in hilly, rocky terrain. Grade staking in rocky soils and on slopes is time consuming and difficult. Laser control eliminates grade staking, but multiple set up are required on sloping areas. **Topcon's System Five 3D-GPS+ machine control** eliminates grade staking and provides improved accuracy.

Another advantage is not waiting for the services of others to keep tabs on a job. Topcon's **GPS+ rover** enables **Burrola** to can perform field topo's and check quantities without having to keep track of truck load counts.

Burrola would recommend **Topcon** to other companies because it virtually eliminates staking. With his **Topcon GPS+ rover**, he can check grade anywhere on the job.
