- 5,200 lf sanitary sewer

Topcon Products:

- HiPer Lite+ base / rover / Pocket 3D
- System Five 3D-GPS+ automatic / JD 850C

"Topcon's cut our grading and staking time in half.

I always thought that Topcon products were better than everyone else's.

"We have a pretty good business relationship with Ozark Laser. If we have a problem with anything, they either overnight something in to replace it while ours is getting fixed or if they have one in stock they bring it down"

Dusty Emmert -

Project Superintendent

"The biggest advantage of our Topcon GPS+ survey rover is fast turnaround

time on topo's of rock, dirt - anything we're doing. It enables us to do anything we need to do and put material where it needs to be placed - and know exactly how much goes there.

"I do daily rock topo's for blast purposes - to compare numbers with the blasting sub and with other engineers that are out there topo-ing for the owner. It's unbelievable. It's really helped us out a whole bunch.

Pocket 3-D is awesome. It's great to be able to look at the job on your screen, scroll through, check your elevations - right there in your hand all day. We keep the plans with us but don't need to rely on them when we're in the field"

Jeremy Keller - Field Engineer
